

Client Lead Management System (Mini CRM)

Task Description

Build a simple CRM (Customer Relationship Management) system to manage client leads generated from website contact forms, referrals, social media platforms, and other business sources.

The system should allow users to create, view, update, and delete lead information while tracking lead status and maintaining follow-up notes.

Frontend Technologies

- HTML5
- CSS3
- JavaScript (ES6)

Backend Technologies (Recommended)

- Node.js
- Express.js

Database (Recommended)

- MongoDB
- MySQL

Key Features

Lead Listing

Store and display:

- Client Name
- Email Address
- Lead Source
- Lead Status

Lead Status Management

Users can update lead status:

- New
- Contacted
- Converted

This helps businesses monitor customer progress.

Notes & Follow-Ups

Store:

- Meeting notes
- Customer requirements
- Follow-up schedules

- Discussion summaries

- **CRUD Operations**

- **Create**

- Add new leads.

- **Read**

- Display all leads.

- **Update**

- Edit lead information.

- **Delete**

- Remove unwanted leads.

Skills Gained

This project helps develop:

- CRUD Operations
- Frontend Development
- Data Management
- Business Workflow Understanding
- Client Relationship Management Concepts
- JavaScript Programming
